Stand-alone Flag Range + Hardware

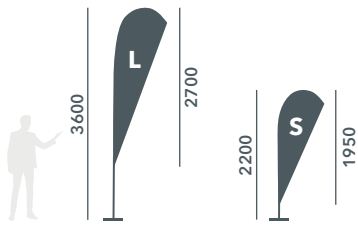

Single Sided

This particular fabric used is the best product we've found for longevity, opacity and the strike-through of colour to the reverse side. It's a premium product, but not the best on strike-through in colours with very little ink lay-down, but fantastic on anything with a bit of saturation.

Inks used will last well outdoors without fading too quickly (expect an every-day use flag to start fading after 6 months). We have a few flags in Wellington that are still going strong after everyday use for a year.
